ECONOMIC CONDITIONS IN JULY

During the two years since the war ended economic activity in Canada has reached record levels. Civilian Employment is greater than at any time during the war. Production in civilian industry has reached a level this year above pre-war peaks and construction activity is equal to the levels of Prices have advanced substantially since the end of the war and sales although higher appear to be levelling off to some extent. Controls have been withdrawn from most aspects of the economy with the exception of rent controls on housing and price controls over a limited list of essential consumer goods.

Prices

The rapid increase in both sales and prices in the distributive trades over the last two years is indicative of the strength of the demand for goods generated by the high level of incomes and the deferred purchasing resulting from the war period. The change in the rate of increase from the first postwar year to the second reflects the advance in price which has accompanied the gradual withdrawal of controls.

Of a total increase of nearly 13 per cent in retail prices in the last two years, nearly 9 per cent of the advance has taken place in the last twelve months. At wholesale, nearly 17 per cent of the total increase of 22 per cent has taken place in the same period. Sales by value without adjustment for price changes have moved in the opposite direction. At retail, sales in the first twelve months after the war were nearly 10 per cent above the preceding year, and more recently they increased less than 8 per cent. At wholesale, out of a total increase of slightly more than 28 per cent, nearly 17 per cent was attained in the first twelve months, less than 11 per cent in the period just ended.

With all price indexes showing further increases in June, sales of consumer goods took a slight dip. Retail sales in June were 6.1 per cent below sales in May, contrary to the seasonal movement in the last ten years when sales have remained at very much the same level during the two months. largest declines were in furniture and in women's clothing stores, the groups which in the cost of living index have in the last several months shown the sharpest increase in prices. clothing stores and shoe stores, however, continued to record increases in sales

Production of consumer durables automobiles, washing machines, refrigerators-has continued at high levels and shipments are above pre-war Sales of new motor vehicles peaks. in June were more than 50 per cent greater than in January; passenger car sales continued to advance through June although sales of trucks and sales for the first six months of this year by units were more than double sales in the first half of last year, and by dollar value nearly triple. average price of automobiles sold has advanced from just under \$1,500 to over \$1,700 in the last year.

Wholesale prices increased again in June the index rising from 125·3 in May to 127·8, although the rate of increase declined. The major increases were shown in non-ferrous metals, chemical products and textiles. Cottons were responsible for the major part of the increase in textile prices, woollens rising slighly.

Copper and brass products, lead and zinc, iron and steel hardware items were higher. Following the increase in the United States, prices of coal mainly imported bituminous, rose again in June. Susbequent increases in steel and steel products, automobiles, etc., have not yet been reflected in

wholesale markets in Canada, although with current imports of these goods from the United States at high levels, they undoubtedly will.

Farm products rose only slightly this month, rye was the only grain to advance, while hogs and eggs rose slightly.

The cost of living index at the end of June had risen 1 per cent over May, the smallest increase since February. The food and home furnishings groups were responsible for the major part of the advance, the clothing and fuel groups also showing an increase. Rents remained the same and the group of miscellaneous items advanced only slightly.

Agriculture

The severe heat wave in midsummer has again threatened the output of grain and field crops following the adverse weather conditions of the The hot weather, however, repaired to a degree the damage resulting from late sowing and has itself been checked in large areas before the results were drastic. Consequently, crop estimates for this year, although below last year's for wheat, oats and barley, are higher for fall and spring rye, flaxseed, hay and clover. output of fall wheat, for example, is expected to exceed last year's only because the acreage sown is greater, the yield per acre is reduced from 29.8 bushels in 1946 to an estimated 26.8 bushels this year.

For several crops the greater acreage this year is expected to compensate to some extent for a decline in yield. In fall wheat especially the 166,000 additional acres is forecast to bring the output up to 19 million bushels, 3,000,000 greater than last years. Similarly with barley an increase in acreage has reduced the estimated decline in output to less than 5 million bushels although the yield is anticipated to be nearly 5 bushels per acre less than last year's 25.5 bushels. For spring wheat and oats, on the other hand, the acreage sown was less extensive than last year and yields also are expected to be reduced from $17 \cdot 2$ bushels for wheat to $14 \cdot 7$ bushels,

and for oats from 33·1 to 26·2. The rye crop is estimated at double that of 1946 as a result of a much higher yield on a larger acreage. Flaxseed production is also greater as the yield is estimated at the same level as last year on a larger acreage.

The Canadian contract to ship 160 million bushels of wheat to the United Kingdom last year was filled by the end of the crop year, and total exports during the year are estimated at as much as 240 million bushels. The continuing world shortage of food makes it apparent that the pressure of demand on North American bread grains will not be reduced during this crop year.

The short crop of oats forecast for this fall and the comparatively small grain production in Eastern Canada, where output is expected to be no more than half that of last year, has made necessary the continuance of transport subsidies on field grain shipments from the west, and subsidies on feed grains are to be continued as long as ceiling prices are retained on the major animal products.

Housing

The broad program of housing construction planned for the post-war period appears to be settling down to a lower level than called for in the original target. Higher building costs and heavy demand from commercial and industrial building interests have reduced the proportion of residential construction in the building program. Though residential construction is lagging, total building has reached a very high level.

Construction contracts awarded rose from an average of \$39 million per month in the last half of 1945 to over \$57 million in the first half of 1946 and have continued at this level. Employment rose from an estimated 184,000 in November, 1945, to 244,000 in November last year. Monthly indexes of employment in building construction, since the middle of 1945, have shown a steadily higher rate of activity over the corresponding month in the previous year. The level of

activity reached early this summer attained the peak level reached in the late summer of 1929.

Although the dollar value of contracts awarded has been sustained at near the 1946 level in the first half of this year, the increase in the cost of construction has meant a decline in the real volume of awards. At the same time shortages of supplies and of skilled labour have lengthened the time needed for completions.

Over the same period the type of construction undertaken has also been changing. In August, 1945, and for the next several months, residential construction accounted for half of the total volume of contracts awarded. During 1946, however, and into this year, the proportion has seldom been over a third. In residential construction the decline has not only been comparative; contracts awarded in the first half of 1947 were over 25 per cent below the volume awarded in 1946, and adjusting the decline by an estimate of the increase in dollar costs, the volume is less than two-thirds of that of last year.

This decline does not make the achievement of the government's home building program very probable. The original target set for this year was 80,000 completed units and for each of the following four years, 100,000. 1946 the total number of dwelling units completed totalled 64,000 and it has been estimated that about 40,000 uncompleted dwellings were carried over at the end of the year. Current estimates of the Central Housing and Mortgage Corporation place a figure of 68,000 completions for 1947 as probable. That is of the total number of projects commenced this year not more than 30,000 are expected to be finished.

Although the lengthened building time required to complete homes is explained by shortages of building materials, and the scarcity of skilled labour, the output of materials compares very favourably with past years. Lumber, cement, brick and clay products, structural steel supplies and builders hardware are all being produced

in volume. The output of cement in the first five months of this year, for example, has been running about 15 per cent higher than in the same period last year, and imports have increased substantially.

Boots and Shoes

During the first five months of 1947 the production of boots and shoes in Ganada has fallen below the output reached in 1946 by approximately 6 per cent. This percentage is divided somewhat unevenly between adult's and children's footwear, men's and women's shoes are 5 to 6 per cent below last year, children's 8 per cent. Total output of footwear is reduced more than this by over 12 per cent, since the production of slippers, mocassins, play shoes and miscellaneous types of footwear are running at about two-thirds last year's level.

Tanners' receipts of hides in the same period were 15 per cent greater than in 1946, promising a larger supply of sole and upper leather for boot and shoe production. Imports of hides under the government aided purchase schemes have increased substantially over the last year and are expected to maintain total supplies at the tanner level in spite of the decline in domestic slaughterings, a decline which amounted to 18 per cent for the first half of 1947 in comparison with the same period in 1946.

The increased dependence on foreign supplies of hides to fill the requirements of the boot and shoe industry will probably result in a greater readjustment of prices when controls over hides and leather are lifted and the foreign hides are imported at world prices. The difference between the price of hides on the world market and on the domestic Canadian market is substantial and has widened considerably in the last year and a half since the U.S. controls were dropped and international allocation discontinued. Wholesale shoe prices in May this year are already nearly 40 per cent over the level of May, 1939, and a further increase may well result in a decline of purchases.

STATISTICIEN DU DOMINION: HERBEET MARSHALL CHBF, BRANCHE DES STATISTIQUES ÉCONOMIQUES: SYDNEY B. SMITH

SITUATION ÉCONOMIQUE EN JUILLET

Durant les deux années qui se sont écoulées depuis la fin de la guerre, la situation économique au Canada a atteint de nouveaux sommets. L'embauchage civil est plus considérable qu'en aucun temps durant la guerre. La production de l'industrie civile s'établit cette année à un niveau qui dépasse les maximums des années d'avant-guerre et l'activité dans la construction est égale à celle de 1929. Les prix avancent sensiblement depuis la fin de la guerre et les ventes, bien qu'elles soient plus élevées, semblent se stabiliser jusqu'à un certain point. Les régies sont abolies dans la plupart des divisions économiques, à l'exception de celle du loyer, du logement et des prix de certaines denrées essentielles de consommation.

Prix

L'augmentation rapide des ventes et des prix dans les commerces de distribution, comparativement aux deux dernières années, offre une indication de la puissance de la demande de denrées, occasionnée par le niveau élevé du revenu et par les achats différés à cause de la guerre. Le changement dans le rythme de l'augmentation durant la deuxième année complète d'après-guerre par rapport à la première reflète l'avance des prix qui a accompagné l'abolition graduelle des régies.

Près de 9 p. 100 de l'augmentation totale de près de 13 p. 100 dans les prix de détail durant les deux dernières années. Le produit durant les douze derniers mois; près de 17 p. 100 de l'augmentation totale de 22 p. 100 des prix de gros se produit durant la même période. La valeur des ventes, sans ajustement pour tenir compte des changements des prix, s'oriente dans une direction opposée. Les ventes de détail au cours des douze premiers mois qui suivent la fin de la guerre dépassent de près de 10 p. 100 celles de l'année précédente, et, plus récemment, elles augmentent de moins de 8 p. 100. Dans le domaine du gros, près de 17 p. 100 d'une augmentation totale de 28 p. 100 se produit durant les

douze premiers mois et moins de 11 p. 100 durant la période qui vient de se terminer.

Comme tous les indices des prix augmentent de nouveau en juin, les ventes de denrées de consommation diminuent un peu. En juin, les ventes de détail sont 6·1 p.100 au-dessous de celles de mai, contrairement au mouvement saisonnier des dix dernières années alors que les ventes se maintiennent au même niveau durant les deux mois. Les déclins les plus prononcés sont ceux des magasins de meubles et de vêtements pour femmes, groupes qui ont déclaré les augmentations de prix les plus considérables dans l'indice du coût de la vie depuis plusieurs mois. Les ventes des magasins de vêtements pour hommes et des magasins de chaussures continuent, cependant, à augmenter.

La production de denrées durables de consommation (automobiles, lessiveuses et réfrigérateurs) se maintient à des niveaux élevés et les expéditions sont plus fortes que durant les années cime d'avant-guerre. Les ventes de véhicules-moteur neufs sont de plus de 50 p. 100 plus considérables en juin qu'en janvier; les ventes de voitures de tourisme continuent d'augmenter en juin malgré la baisse légère des ventes de camions et d'autobus par rapport à mai. Les ventes totales durant les six premiers mois de l'année. par unité, sont deux fois plus fortes que celles de la période correspondante l'an dernier, et les ventes, en dollars, presque trois fois plus considérables. Le prix moyen des automobiles vendues augmente d'un peu moins de \$1,500 à plus de \$1,700 durant l'année dernière.

Les prix de gros augmentent de nouveau en juin et l'indice s'élève de 125·3 en mai à 127·8, bien que le rythme de l'augmentation diminue. Les principales augmentations sont enregistrées par les métaux non ferreux, les produits chimiques et les textiles. Le coton est responsable de la plus grande partie de l'augmentation des prix des textiles, tandis que la laine augmente légèrement.

Les produits du cuivre et du laiton, le plomb et le zinc, et les articles de quincaillerie en fer et en acier, augmentent tous. A la suite de l'augmentation aux Etats-Unis, les prix du charbon, particulièrement le bitumineux importé, augmentent encore en juin. Les augmentations subséquentes de l'acier et des produits de l'acier, des automobiles, etc., ne se reflètent pas encore sur le marché de gros canadien, mais elles le feront certainement à cause des importations courantes de marchandises provenant des Etats-Unis.

Les produits agricoles n'augmentent que légèrement durant le mois et le seigle est le seul grain qui avance, tandis que les porcs et les œufs s'élèvent

légèrement.

A la fin de juin, l'indice du coût de la vie augmente de 1 p. 100 comparativement à mai, soit la plus faible augmentation depuis février. Le groupe des aliments et celui de l'ameublement sont responsables de la plus grande partie de l'avance. Les groupes des vêtements et du combustible enregistrent aussi une hausse. Le loyer demeure le même et le groupe des articles divers ne s'élève que légèrement.

Agriculture

La vague de chaleur torride de la mi-été est venue, après la température défavorable du printemps, mettre en danger encore une fois la production de céréales et des grandes cultures.

La chaleur, cependant, a rémédié, dans une certaine mesure, aux dommages qui avaient découlé des semailles tardives et elle a pris fin dans de grandes régions avant de causer trop d'avaries. Il en résulte que la récolte prévue de seigle d'automne et de printemps, de graine de lin, de foin et trèfle sera meilleure que l'an dernier, bien que celle de blé, d'avoine et d'orge soit moins considérable. Par exemple, la récolte de blé d'automne dépassera, selon les prévisions, celle de l'an dernier pour la seule raison que les emblavures étaient plus étendues; le rendement décline de 29.8 boisseaux l'acre en 1946 à 26.8 boisseaux cette année.

Il est prévu que, dans le cas de plusieurs cultures, un plus grand acré-

age cette année contre-balancera, dans une certaine mesure, le déclin du rendement. Dans le cas du blé d'automne tout particulièrement, les 166,000 acres supplémentaires donneront une production estimative de 19 millions de boisseaux, soit 3 millions de plus que l'an dernier. De même pour l'orge où l'augmentation de l'acréage réduit le déclin estimatif de la production à moins de 5 millions de boisseaux, bien qu'il soit prévu que le rendement soit de 5 boisseaux l'acre de moins que l'an dernier (25.5 boisseaux l'acre). Par ailleurs, l'acréage de blé de printemps et d'avoine est moindre que l'an dernier et il est aussi prévu que le rendement sera aussi réduit de 17.2 boisseaux pour le blé à 14.7 boisseaux et, pour l'avoine, de 33·1 à 26·2. La récolte de seigle est estimée à deux fois celle de 1946 à cause d'un rendement plus considérable et d'un acréage plus grand. La production de graine de lin est aussi plus forte, puisque le rendement est estimé le même que celui de l'an dernier tandis que l'acréage est plus grand.

L'entente canadienne exigeant l'expédition de 160 millions de boisseaux de blé au Royaume-Uni l'an dernier est acquittée à la fin de la campagne agricole et les exportations globales durant l'année sont estimées à 240

millions de boisseaux.

La pénurie mondiale persistante de vivres démontre que la demande de céréales panifiables de l'Amérique du Nord ne diminuera pas au cours de la

présente campagne agricole.

La récolte peu abondante d'avoine prévue pour cet automne et la production comparativement faible de céréales dans l'Est canadien, où le rendement ne sera sans doute pas de plus de la moitié de celui de l'an dernier, exige le maintien des subventions sur le transport des céréales de grande culture provenant de l'Ouest; de même, les subventions sur les céréales fourragères seront maintenues aussi longtemps que les prix maximums seront retenus pour les principaux produits animaux.

Logement

Le vaste programme de construction de maisons, projeté pour la période d'après-guerre, semble se stabiliser à un niveau inférieur à celui visé au début. Le coût plus élevé de la construction et la forte demande commerciale et industrielle diminuent la proportion de maisons construites en vertu du programme de construction. Bien que la construction de maisons soit en retard, la construction globale

atteint un niveau fort élevé.

Les contrats adjugés augmentent d'une moyenne mensuelle de 36 millions de dollars durant le dernier semestre de 1945 à plus de 55 millions de dollars pendant le premier semestre de 1946 et continuent d'avancer au même rythme. L'emploi augmente du total estimatif de 184,000 en novembre 1945 à 244,000 en novembre l'an Les indices mensuels de dernier. l'emploi dans la construction de maisons, à compter du milieu de 1945, manifestent une activité sans cesse grandissante par rapport au mois correspondant l'année précédente. Le niveau d'activité atteint tôt cet été égale le niveau sans précédent de la fin de l'été de 1929.

Bien que la valeur, en dollars, des contrats adjugés demeurent près du niveau de 1946 durant le premier semestre cette année, l'augmentation du coût de la construction entraîne un déclin du volume effectif des adjudications. En même temps la pénurie de matériaux et de main-d'œuvre font

languir les travaux.

Durant cette même période, le genre de construction entreprise varie aussi. En août 1945, et au cours de plusieurs des mois qui suivent, la construction de maisons représente la moitié du volume global de contrats adjugés. En 1946, cependant, et durant une partie de la présente année, la proportion ne dépasse que rarement un tiers. Dans la construction de maisons le déclin n'a pas été simplement relatif; les contrats adjugés durant le premier semestre de 1947 déclinent de 25 p. 100 auprès du volume adjugé en 1946 et, après ajustement du déclin au moyen d'une augmentation estimative du coût en dollars, le volume s'établit à moins de deux tiers de celui de l'an dernier.

Ce déclin rend peu probable la réalisation du programme gouvernemental de construction de maisons. L'objectif initial visé cette année était de 80,000 unités terminées et durant chacune des quatre année à venir, de 100,000 unités. En 1946, le total d'unités terminées atteint 64,000 et un total estimatif de 40,000 unités non terminées est reporté à la fin de l'année. Les estimations courantes de la Société centrale d'hypothèques et de logement établissent à 68,000 les unités qui seront probablement terminées en Donc, du total d'unités commencées cette année, il est prévu que pas plus de 30,000 unités seront terminées.

Bien que le délai requis pour construire et terminer une maison soit trop long à cause de la pénurie de matériaux et de main-d'œuvre, la production de matériaux se compare très favorablement à celle des années passées. Le bois d'œuvre, le ciment, la brique et les dérivés de l'argile, l'acier de charpente, les fournitures et la serrurerie de bâtiment sont tous produits en grande quantité. production de ciment durant les cinq premiers mois cette année, par exemple, est de près de 15 p. 100 supérieure à celle de la même période l'an dernier; les importations augmentent sensiblement.

La production et les expéditions de briques et de blocs de béton, et de tuyaux de ciment sont plus élevés. Les expéditions d'acier fini aux entreprises de construction atteignent 60 p. 100 de plus durant les cinq premiers mois cette année que durant la période correspondante l'an dernier, reflétant tant l'augmentation globale de la construction que la proportion plus élevée de construction industrielle et de génie.

Au cours des cinq premiers mois de 1947, la production de chaussures au Canada s'établit à 6 p. 100 environ au-dessous de celle de 1946. Ce pourcentage se divise quelque peu inégalement entre les chaussures pour adultes et les chaussures pour enfants; les chaussures d'hommes et de femmes déclinent de 5 à 6 p. 100 par rapport à l'an dernier et les chaussures d'enfants, de 8 p. 100.

Bureau fédéral de la statistique, le 31 août 1947.
